

Description

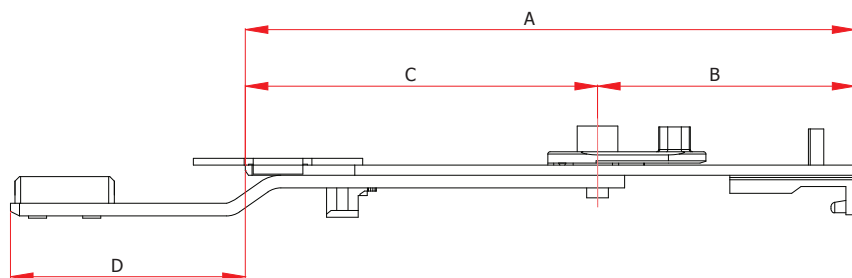

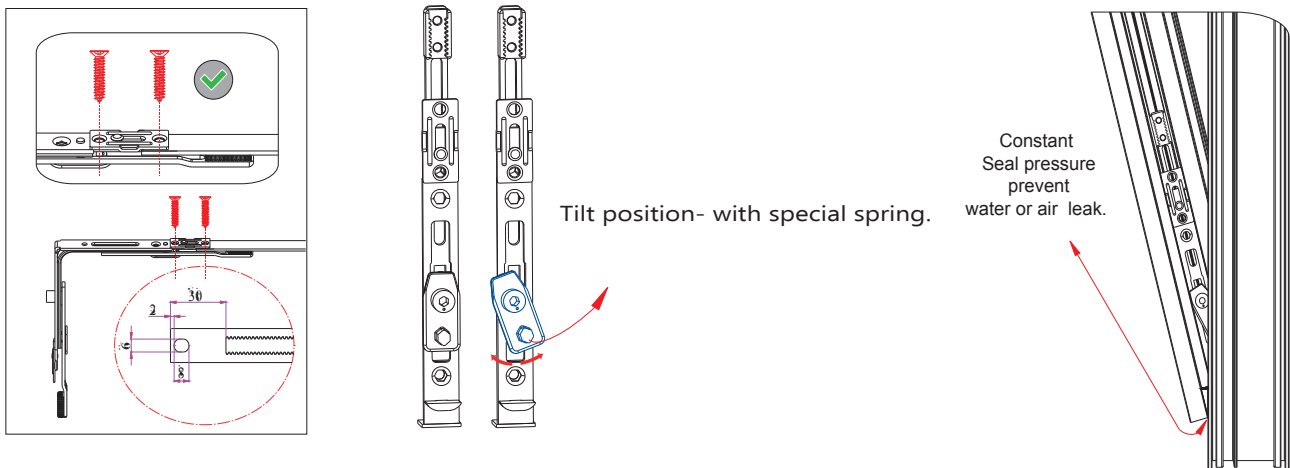

- The length of the bottom extension piece is 135 mm and the locking point is located at 57 mm to the corner of the sash.
- The connection part of extension piece is special designed to allow 2 screws during assembly. This way the steel cover is fixed properly and safely.
- The oscillating part of the bottom extension piece is tensioned with a spring so you need only one type of bottom extension piece for all dimensions. Thanks to this special spring, seal pressure is remaining constant which is a must to prevent water or air leak.

Material Specification

- Body : Steel acc. EN 10149
 Surface : Corrosion resistance up to 500 hours acc. DIN 50021
