

Description

- Focus8 self locking door gear has 2 automatic latches.
- Automatic latches, throw 20 mm when the door is pulled shut. Special designed locking plates keep the latches so the door is locked automatically without using handle or key.
- The latches are secured against being pushed back, similar to deadbolt. The deadbolt and latches increase the security level of the door. The automatic latches would be unlocked by key or handle. The deadbolt is locked or unlocked only with key.
- The latches and deadbolt are reversible, easy to change on left or right.

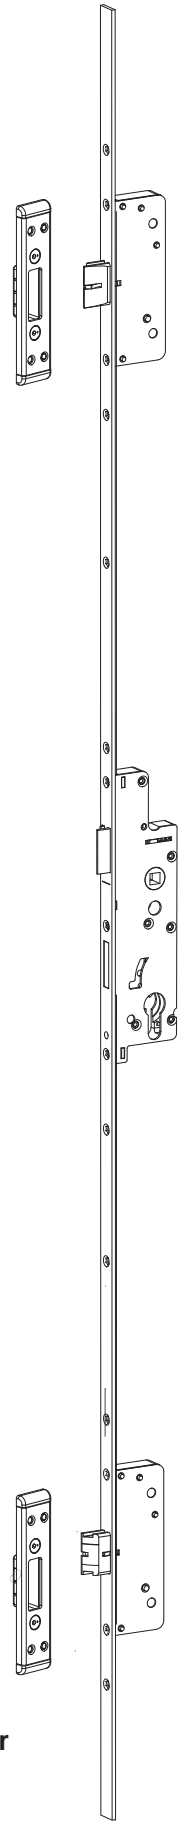

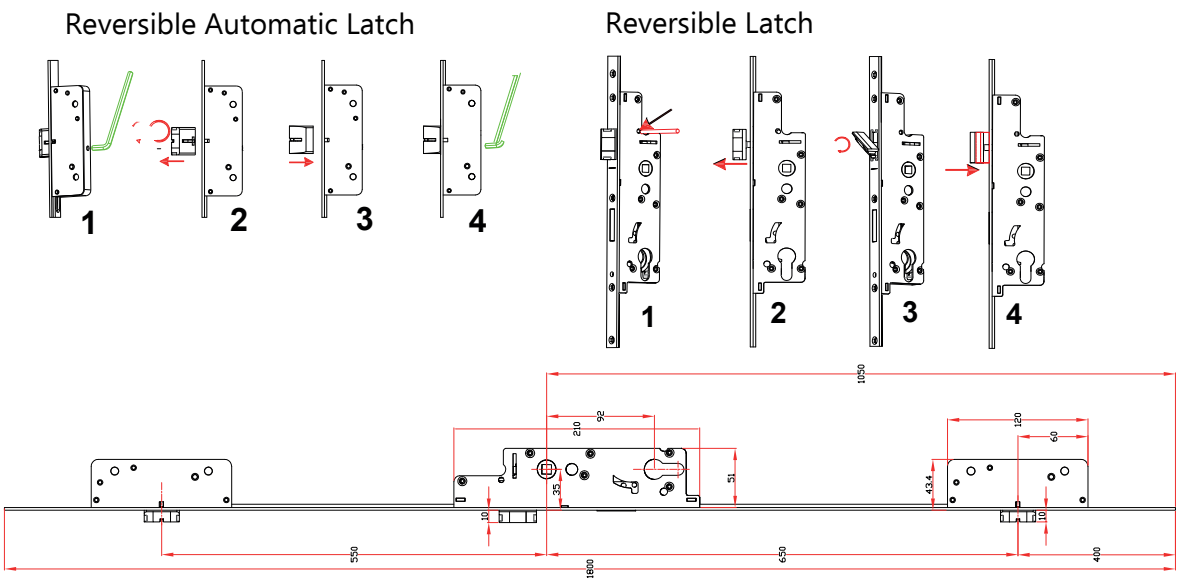

Technical Data

Operation : Handle and Key
