Peace of Mind

Intelligent solutions for your comfort.

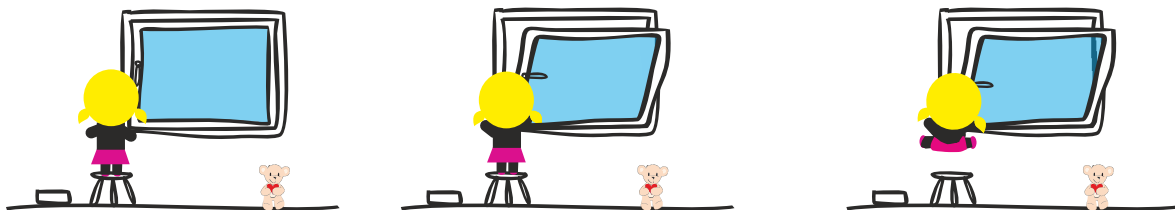

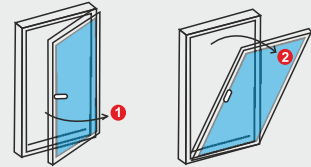

“ Keep the little ones safe! ”

An average of 4000 kids fall out of windows and hurt themselves every year. TGP Tilt First System is an innovative product that aims to make your home accident-free.

Tilt & Turn System

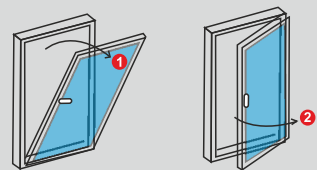

1. Turn position, window opens completely.
2. Tilt position, window opens partial.

This product is ideal for children rooms, kindergartens, hotels and dormitories. It also adds extra security with the tilt from bottom and lockable window handle.

Tilt First (Tilt Before Turn) System

1. Tilt position: This is the ventilation position (optional lockable handle with profile cylinder blocks it)
2. Turn position: This position is available with the optional lockable handle key

If you use TGP *fora* lockable handle with profile cylinder, window can't be opened all the way. Tilting to turning is only possible with the handle key, so kids can't accidentally switch from tilt to turn.
